

TOOLNAUT

THE HANDBOOK

***YOUR AI STACK,
CHOSEN FOR WHO
YOU ACTUALLY ARE.***

798 AI tools. Nine questions. One plan you can actually follow. This book explains what Toolnaut does, how it decides, and how to use every part of it.

THE PROBLEM WITH “BEST AI TOOLS” LISTS

There are thousands of AI tools and roughly infinite listicles ranking them. None of them know anything about you — your job, your budget, how much time you have on a Tuesday night, or what actually stopped you last time.

Toolnaut starts from the opposite end. It asks you nine short questions, then builds a stack from the 798 tools in its catalogue and a four-week plan for learning them. Every pick can explain why it was chosen for **you** — not why it is popular.

HOW IT WORKS

01

ANSWER NINE QUESTIONS

About a minute. No account, no email. Your answers stay in your browser.

02

GET YOUR STACK

A named persona and a set of tools matched to your domain, level, budget and pace.

03

FOLLOW THE 4-WEEK ORBIT

Week by week, tool by tool. Each week unlocks when you finish the one before it.

04

EXPLORE AND ADJUST

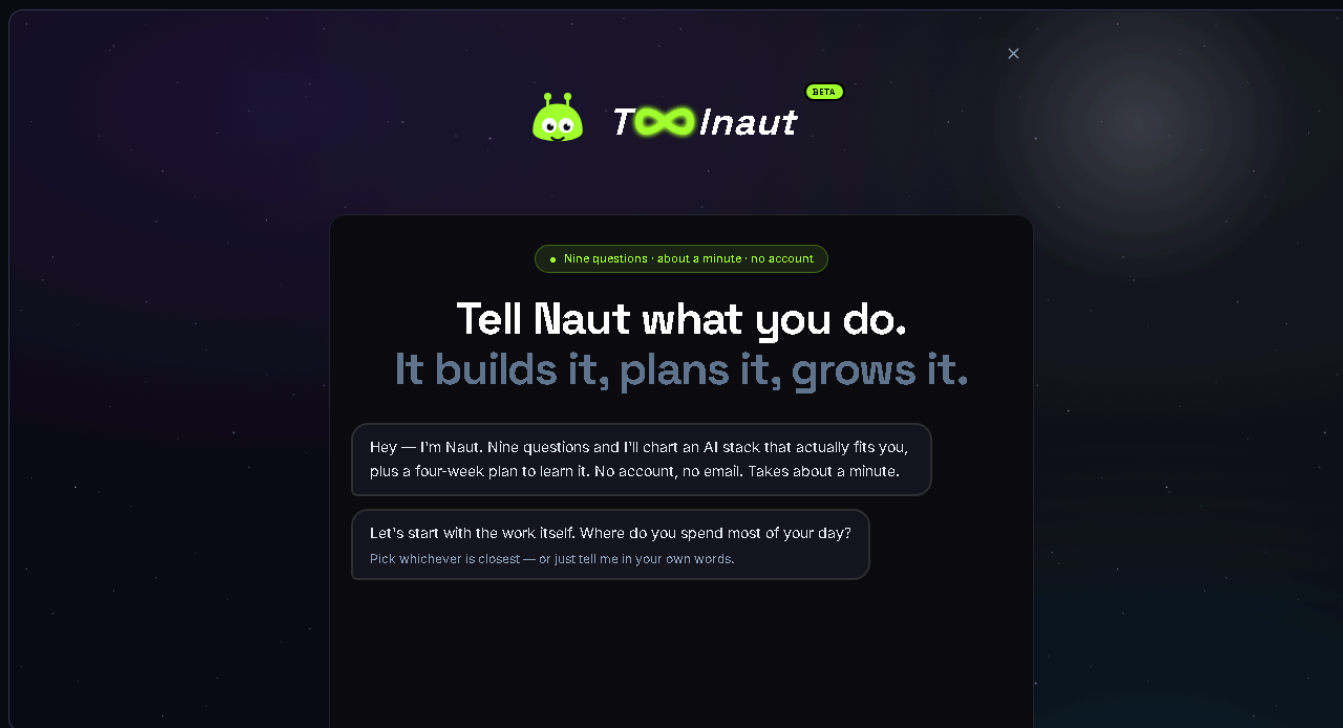

Search the full catalogue, compare tools side by side, add and drop as you go.

YOU CAN TRY ALL OF IT WITHOUT SIGNING UP

The whole app works as a guest — the quiz, your stack, the learning plan, search and compare. Everything is saved to this browser. Signing in exists so your work can follow you to another device, not to unlock features.

TELL NAUT WHAT YOU DO

The intake is a conversation, not a form. Nine questions, each with tappable answers — or type your own in your own words.

The intake at toolnaut.xyz/goal — no account required.

WHAT IT ASKS, AND WHY

QUESTION	WHAT IT CHANGES
Your domain	Which corner of the catalogue you start from — code, design, writing, data, automation or learning
Role & career stage	The persona you are given, and how advanced the picks are
Experience	Whether you get beginner-friendly tools or the powerful, fiddly ones
Goal	Ship a project, get a job, save time, freelance or lead — reorders everything
Budget	A “free only” answer means you are never shown a paid tool as a core pick
Pace	How much the four-week plan asks of you each week
Learning style	The tip attached to every step — a googler and a course-taker get different advice
Blocker	What actually stops you, answered directly in your plan

YOUR STACK

The home screen. Your persona, your streak, where your skills are thin, and the kit itself.

Your stack — persona, streak, skill graph and the tools themselves.

WHAT IS ON THIS SCREEN

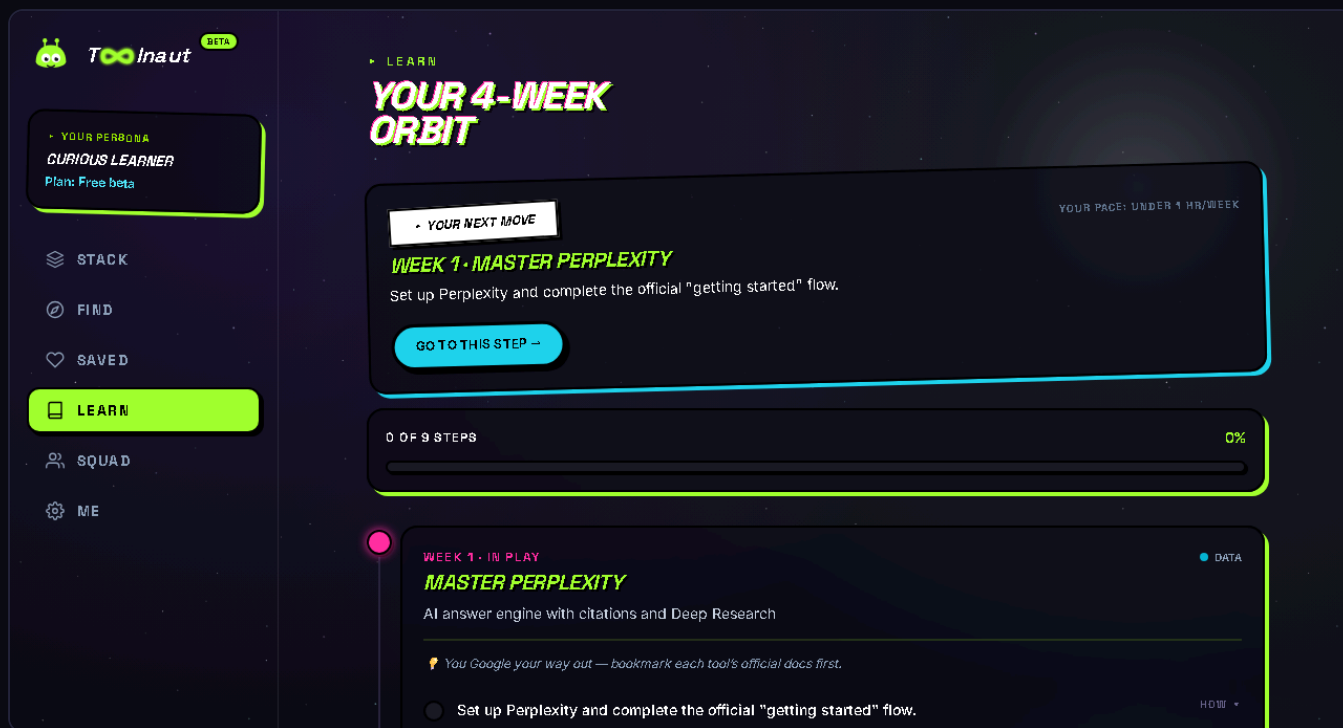

- **Your persona** — a name for how you answered, e.g. “Curious Learner”.
- **Streak** — the run of days you have opened the app. Real, and yours alone.
- **Skill graph** — one bar per domain, showing how far along you are with the tools you own rather than how many you have collected. Empty bars are the point: they show where the gaps are.
- **Your kit** — every tool you have added. Tap the status button to cycle it: **Not started** → **Exploring** → **Using weekly** → **Mastered**. That is what fills the graph.
- **Today’s drop** — one fresh pick a day, matched to you and not yet in your stack.
- **Points** — earned from the size of your stack and the steps you complete.

WHY THE BARS START EMPTY

Adding a tool is not progress. The graph moves when you mark a tool as actually being used, which is why a full kit can still show a flat line.

THE FOUR-WEEK ORBIT

A stack without a plan is just a list. The orbit turns it into four weeks of small, specific moves.

Your 4-week orbit — one tool per week, the next locked until you finish this one.

- **One tool per week**, drawn from your own stack.
- **Two concrete steps per tool** — set it up, then use it on something real. Each has a *How* expander if you get stuck.
- **Weeks lock**. Week two opens when week one is done, so you finish things instead of collecting them.
- **Week four is a build**. Ship one small real project using your top two tools together.
- **The tip is yours**. It is written for the learning style you picked.

SET THE PACE ONCE

The plan is sized to the time you said you had, from under an hour a week to five-plus. Change that answer and the orbit resizes with it.

FIND & COMPARE

The stack is a starting point, not a cage. The full catalogue is open, searchable and ranked for you.

FIND

Search, filter by domain, price and level, and see what the radar found this week.

Search by name, company or problem. Filter by domain, by price (**free, freemium, paid**) and by level. Once you have taken the quiz, every card carries a personal match score. **New this week** is the automated radar's latest finds.

COMPARE

	CHATGPT	CLAUDE	PERPLEXITY
MATCH	70%	70%	98%
CATEGORY	Writing	Writing	Data

Two to four tools side by side, including how well each matches you.

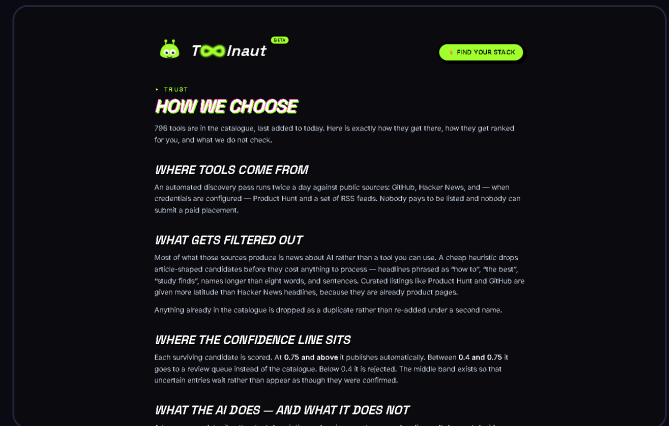

Tick **Compare** on two to four tools and see them on one screen: match score, category, real pricing, level, developer, year, audience, status and tags. Add the winner to your stack without leaving the page.

SEE IT BEFORE YOU START

Two pages exist purely so you can judge Toolnaut before giving it a single answer.

A complete worked example stack.

How tools are chosen, in plain language.

HOW TOOLS GET IN

An automated pass runs twice a day against public sources — GitHub, Hacker News, and, where configured, Product Hunt and RSS. Candidates are scored: above **0.75** a tool publishes automatically, between **0.4** and **0.75** it waits in a review queue, below that it is rejected. The middle band exists so uncertain entries wait rather than appear as though they were confirmed.

WHAT THE AI DOES — AND DOES NOT

A language model writes the short description and assigns a category. It does **not** decide whether a tool is good, and it does not set your ranking. Ranking is a scoring function over your own answers, which is why every pick can show its reason.

WHAT IS NOT VERIFIED

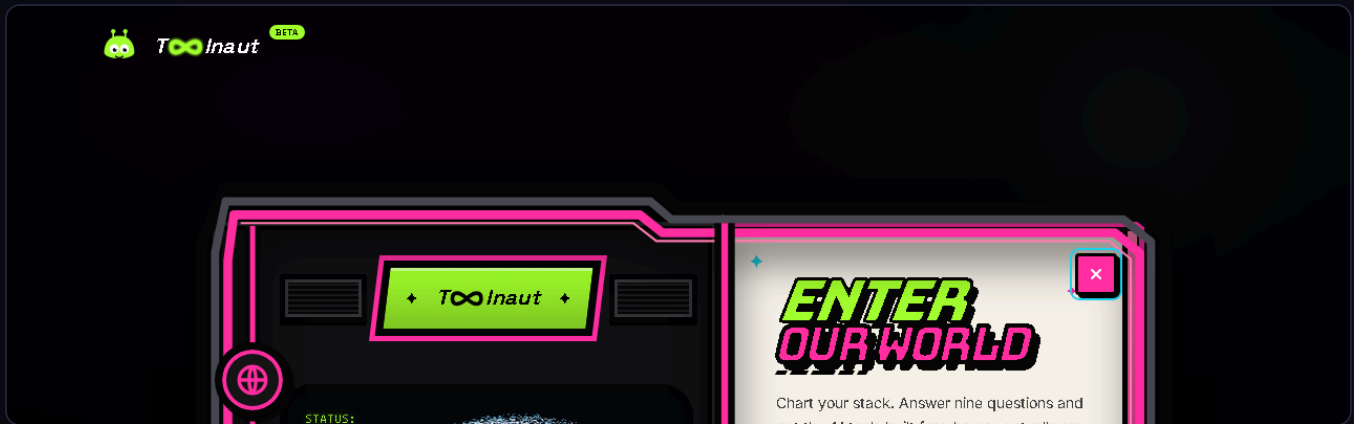

Pricing, free-tier limits and feature claims come from each tool's own listing and are not independently confirmed — vendors change plans without notice. Check the vendor's pricing page before committing money or data. Security and privacy practices are not audited either.

NO COMMERCIAL RELATIONSHIPS

No affiliate links, no referral parameters, no sponsored placements, no payment for inclusion or position. If that ever changes it will be disclosed before it goes live, not after.

KEEPING YOUR WORK

Everything is saved to your browser the moment you do it. Signing in is only about moving it somewhere else.

Sign in with Google or a magic link — no password to invent.

Continue with Google, or have a one-time magic link emailed to you. When you sign in for the first time, everything you did as a guest is offered for import so nothing is lost.

WHAT IT COSTS

Published plans — and an honest split of what is live today.

NOTHING, RIGHT NOW

Toolnaut is in free public beta and takes no payment of any kind — no card is asked for. The plans above are published so the direction is visible, and every line in the comparison is marked either live today or planned. Nothing unbuilt is sold as though it exists.

EVERYTHING, IN ONE TABLE

Each section of the app, what it is for, and whether it needs an account.

SECTION	WHAT IT DOES	ACCOUNT?
Stack	Your persona, streak, skill graph, your kit and the daily drop	No
Find	Search and filter all 798 tools; personal match scores after the quiz	No
Saved	Tools you favourited but have not committed to your stack	No
Learn	The four-week orbit, its steps and checkpoints	No
Squad	The community side — other explorers and standings	No
Me	Avatar, cursor effect, sky controls and your saved answers	No
Compare	Two to four tools side by side on every attribute	No
New	A public feed of what the radar discovered, newest first	No
Example	A complete worked stack, before you answer anything	No
Methodology	Sources, thresholds, and what is deliberately not checked	No

QUICK ANSWERS

Do I need an account?	No. Every section above works as a guest.
Where is my data?	In this browser. Clearing site data clears your stack, so sign in if you want it to survive.
Can I retake the quiz?	Yes, from Me . Your stack and plan rebuild around the new answers.
How often does the catalogue grow?	The radar runs twice a day. 94 of the current 798 tools were found that way.
Something is wrong or out of date.	Tell us — corrections are the mechanism that keeps the rest honest.
